Simple Water Saving Devices

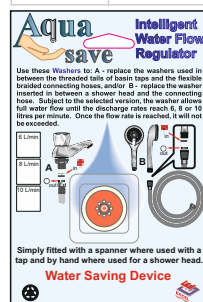

Aqua Save Flow Regulator for Basin Mixer

This Regulator is inserted into a tap outlet of a **Monobloc Basin Mixer**, a typical version of which is shown here. It allows full water flow until the discharge rate reaches 5 litres per minute. Once the flow rate is reached, it will not be exceeded.

Aqua Save Flow Regulating Washer

Use these **Washers** to:

A - replace the washers used in between the threaded tails of basin taps and the flexible braided connecting hoses, and/or B - replace the washer inserted in between a shower head and the connecting hose. Subject to the selected version, the washer allows full water flow until the discharge rates reach 6, 8 or 10 litres per minute. Once the flow rate is reached, it will not be exceeded.

Aqua Save Eco Booster for Sink Mixer

This switch, also known as an Eco Booster is designed to allow the user to switch between high and low flow rates. It automatically resets to low and is supplied with both M22 and M24 threads (male and female) which will suit the vast majority of Monobloc Sink Mixers similar to the two illustrated here on the market. When switched to the low flow rate, it will deliver a maximum of 7 litres of water per minute. It is ideal when a reduced flow rate of water is required; for example when washing vegetables.

Aqua Save Eco Booster for Shower

This switch, also known as an Eco Booster is designed to allow the user to switch between high and low flow rates. It automatically resets to low and is supplied with 1/2" threads to enable its in line installation. When switched to the low flow rate, it will deliver a maximum of 8 litres of water per minute. It is ideal when a reduced flow rate of water is required; for example when applying shampoo.
