Stove Fans

Stove Fans are self-powered, clean, silent and efficient devices that greatly improve heat circulation from your solid fuel burning or gas fired stove.

These devices are powered by a thermoelectric generation module (TEG) which uses the hot surface of the stove to generate an electric current to propel the fan blade. Heat, instead of rising immediately to the ceiling, is propelled directly into the living space and provides an increased level of comfort and greater fuel efficiency.

Features

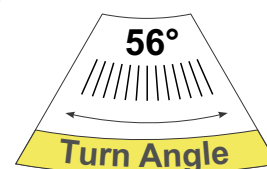

- No external power source required
- No running costs
- Effectively propels warm air into the living area
- Robust and maintenance free
- Promotes efficient fuel consumption
- Safe and silent
- 5 year guarantee

NEAT Standard Fan
