

Easi DRAIN

Mini Sewer Rod Kit

Includes 8 Rods & 2 Tools

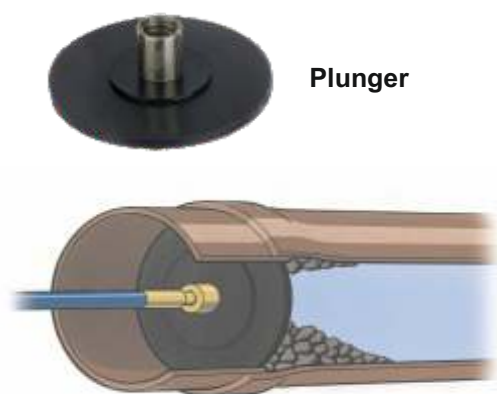

Double Worm Screw

Pierces blockages such as paper or rags and the obstruction is drawn back to clear the pipe.

Plunger

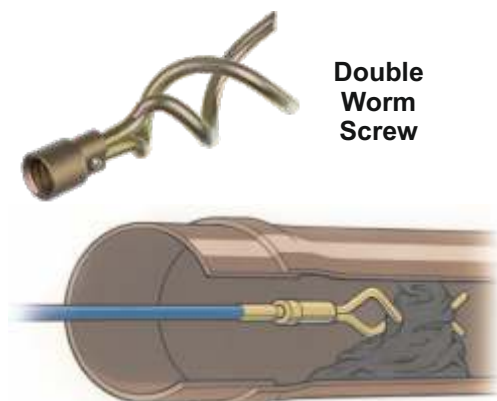

Builds up pressure of water which forces obstruction clear.

Mini Sewer Rod Kit (8 Rods, 2 Tools)

Plunger

Builds up pressure of water which forces obstruction clear

Double Worm Screw

Pierces blockages such as paper or rags and the obstruction is drawn back to clear the pipe.

Easi DRAIN

Sewer Rod Kit

Includes 10 Rods & 4 Tools

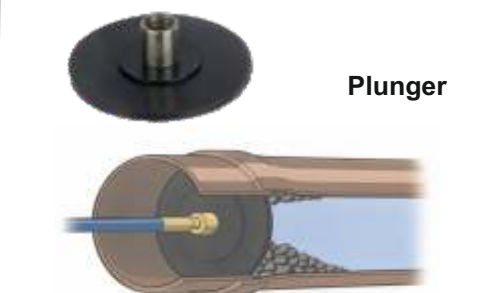

Drain Clearing Equipment

Sewer Rod Kit (10 Rods, 4 Tools)

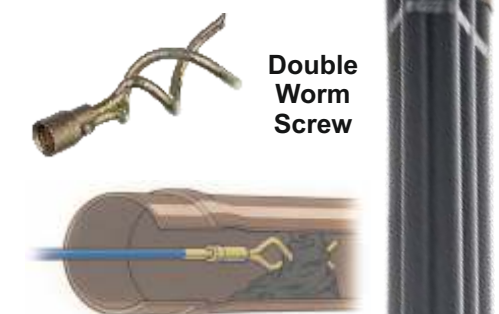

Drop Scraper

Guides rods around difficult bends and removes minor blockages by pushing material clear.

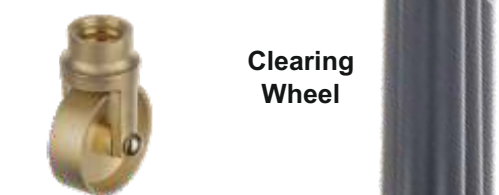

Plunger

Builds up pressure of water which forces obstruction clear.

Double Worm Screw

Pierces blockages such as paper or rags and the obstruction is drawn back to clear the pipe.

Clearing Wheel

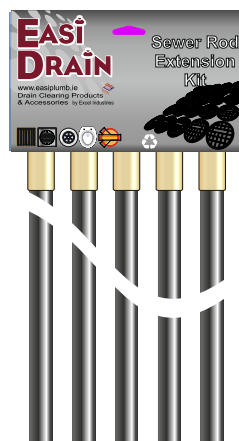

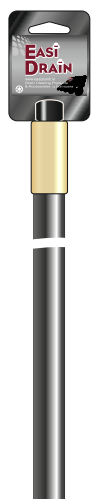

Glides over small obstructions and drops into vertical scraping position to allow offending material to be dragged back towards the operator.

Drain Cleaning Equipment

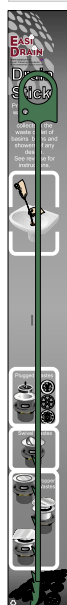

Drain Cleaning Wire

A simple but effective method of clearing drains. The top of the wire which features a "screw head" is introduced into the pipework via a cleaning eye, trap or waste outlet. When it reaches the blockage, it pierces it. The blockage can then be drawn back to the operator.

1 Litre Biozyme Ecodrain A Concentrated Biological Septic Tank & Drain Line Maintenance and Performance Treatment

Restores and maintains biological action to keep all kinds of Septic Tanks functioning properly. Natural and fast elimination of organic solids in pipes and drains. Excellent perfumed sanitising and cleansing formulation. Non toxic, non corrosive. 1 litre - sufficient for 8 week dosing cycle. Graduated measure on side of container for ease of application.

- Non-toxic
- Maintains clean drains
- Easy to store
- Maintains clean septic tanks
- Easy to use
- Graduated Dosing Scale on side

1 Kg Bottle of Caustic Soda

Add to **cold** water, and stir slowly and gently with a wooden stick until the pearls have fully dissolved. Swirl the liquid constantly to prevent "hot spots" developing. **Note** – The solution will heat up.

When Unblocking Drains:

Pour the solution slowly down the drain. Leave for about 30 minutes and then flush with hot or boiling water. Repeat treatment may be needed for stubborn blockages. In the event that you are not successful in unblocking the drain, it may be that the obstruction is too big and dense to be broken down with Caustic Soda solution. In this case it will be necessary to physically remove the offending matter, for which Excel Industries offer a comprehensive range of Drain Clearing equipment specifically designed for this purpose.

BIOMINI	12 x 20gm	5391269635986	Box	16.76

The natural process of biological decomposition has kept our environment in perfect equilibrium since the beginning of time. It's nature's way of recycling and renewing itself through a steady decomposition of organic waste matter and its conversion to simple, essential substances. Conversion of leaves back into fertile soil is one example of this process. This ongoing process is the work of trillions of tiny, naturally occurring, living micro-organisms that use organic waste as their food and energy source. Biozyme harnesses this natural process to meet today's need for cleaning, odour control, and waste processing without the use of potentially harmful chemicals.

Septic Systems can be overloaded by cleaning chemicals, antibiotics, or by intermittent use. Biozyme Sachets restore effective activity in septic systems to reduce bottom solids and surface scum, eliminating the need for excessive pumping. Treatment also reduces odours by degrading malodorous volatile fatty acids released by incomplete digestion. Biozyme technology protects drainage areas by stimulating biological activity to lessen organic liquids and solids in the effluent stream.

Drainex

1. Add contents directly into plug hole, drain or gully.
2. Leave for between 20 minutes to 1 hour, depending on the degree of blockage.
3. Flush area with plenty amounts of water after use.

Overground Drain Clearing Tools

Easi Drain Rotary Operated Drain Clearing Kit

The Easi Drain drain cleaning and un-blocking system is a new and novel method of dealing with blockages and obstructions in drains. Easi Drain is designed to be used primarily by residential and light commercial operators. The unique rod system, which incorporates 10mm diameter POM rods, has demonstrated that both the Flail Head and the various tools have been able to pass through two connected 90 degree Elbows in a 100mm (4") drain pipe - a procedure not possible with conventional cane or polypropylene rods!

Stock Code	Barcode	Package Type & Size (cm)		€
EDRAIN	5391269779253	Tube	1.2m x 110mm	99.50

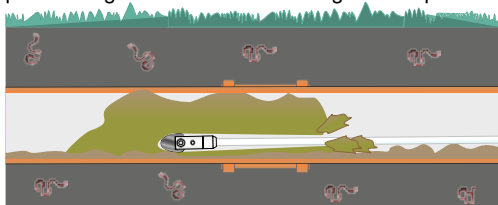

Features and Benefits

- Suitable for Professional and DIY use
- 10 metres long kit (30 Feet)
- Easily break up any debris which will be push along the pipe until it can be removed
- Easy to connect rods together
- It comes with a flail head, plunger head, bulb auger head, grease cutter, "C" cutter head, side cutter head, drill adaptor and hand grip
- Flexible, yet very strong - rods are made from 10mm diameter solid POM
- May be used over and over again

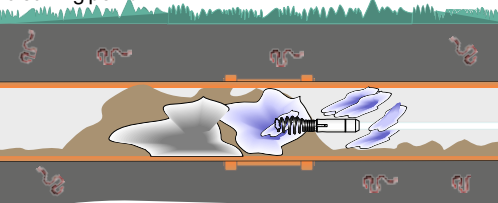

The **Side Cutter** Head which features a 47mm wide toothed "claw" which when rotated will loosen fabric materials or heavy paper blockages which can then be withdrawn or pushed on to the drain cleaning point.

The **Grease Cutter** which features a heavy 33mm wide blade which when rotated is designed to loosen, push through and remove stubborn grease deposits.

The **Bulb Auger** Head which features a 27mm diameter pointed spiral head which when rotated will impale fabric material or heavy paper blockages which can then be withdrawn or pushed on to the drain cleaning point.

The **"C" Cutter** Head which features a heavy 33mm wide blade which when rotated is designed to loosen and remove more stubborn deposits, after which the Flail or Plunger Head should be more effective.

Package Contents

Smart Rod utilizes a rotating head fitted with nylon flails to break up any encrusted deposits. The flail head is advanced along the drain pipe with sections of flexible POM rods. It is rotated while being advanced with the use of a battery operated drill gun (supplied by the operator). The flexible POM rods that are used to advance the heads allow the system to operate around tight right angle bends and even "S" bends which would not be possible for conventional drain clearing rods. Once connected to a POM rod, it is inserted into the drain pipe and the other end of the rod is "snapped" onto the drill adaptor. As the flail advances, more rods are applied in the same way. The flails have a diameter of 300mm (12") and are designed to distort as the head is pushed into the drain pipe. Because the drain rod joints are not secured by a screw thread, the drill can be set to run in either the forward or reverse direction without the possibility of the rods separating. This can be an advantage where stubborn blockages are encountered.

10 x 1M Rods
