- Easily fitted in minutes
- Prevents growth of bacteria
- Prevents dust entering water tank
- Prevents cold water tanks from freezing
- Made from 50mm thick mineral fibre wool insulation
- Meets the requirements of Water By Law 30 in the UK
- Easy to apply installation instructions are printed on the back of the box

Self Adhesive Insulated FoamTape, 10m x 50mm x 3mm

- Made from high quality EPDM elastomeric foam rubber
- Density: 60kg/m³, ±10kg/m³
- Suitable for both heating and cooling applications
- Temperature tolerance: -50 to +110°C
- High resistance to water ingress
- Closed cell elastomeric material designed to reduce thermal losses

Economiser Insulation Products

RadFlect

Radiator Heat Reflecting Barrier (600mm Wide)

An aluminium foil and bubble plastic reinforced sheeting which is easily applied behind radiators. It provides an ideal way of improving the radiators' performance as it reduces heat loss through the external wall behind the radiator. It is available as 600mm wide rolls in 2.5m 5m and 10m Lengths.

Chimney Flue Balloons

The Chimney Flue Balloon is a reusable, simple and easy to use household device that reduces the amount of heat loss through the chimney flue while

at the same time maintains a ventilated living room when the fire is not in use. Because warm air naturally rises, the Chimney Flue is a major source of heat loss. The Chimney Flue Balloon effectively provides a barrier to prevent cold draughts and heat loss, saving you money on fuel bills and naturally making the living area warmer and more comfortable.

It is critical for any living area to maintain a healthy rate of ventilation. With this in mind; the Chimney Flue Balloon has been specifically designed to seal approximately 80% of the Chimney Flue, while the remaining area of the Chimney Flue is used to maintain ventilation within the living area. This is achieved via our unique, square shaped balloon which has been designed to maintain safe ventilation levels. The four corners of the balloon are designed to contact the inner radial surface of the chimney flue which in turn leaves four unsealed spaces allowing for ventilation.

for use with Round Chimney Flue Liners

SB7	36" x 15"	5391524312072	Box	10 x 30	32.00

- Prevents warm air unnecessarily escaping up the chimney when the fire is not in use.
- Reduces heating costs.
- Reduces excessive room ventilation.
- Prevents cold draughts blowing down the chimney.
- Durable design - may be used from season to season.
- Design allows for trickle ventilation.
- Bladder pump Included.
- No tools required

CosySleeve Pipe Insulation

Cosy Sleeve Polyethylene Pipe Insulation with a 13mm Wall - Semi Slit wall. Has a maximum Working Temperature range of between + 5°C and +105°C.

CosySleeve is available singularly in "help yourself" eye catching floor displays. These include two single size units which are 500mm x 500mm and a similar unit which is 800mm wide. There are also two multiple size units which are 1m and 1.2m wide. Multiple size units carry the three different sizes of insulation.

A Closed Cell Polyethylene Flexible Foam Pipe Insulation. It features a Closed Cell Structure which makes it suitable for use both internally and externally. It repels the ingress of moisture and insulates against heat loss up to 105°C. It is particularly effective for the thermal insulation of domestic heating and plumbing pipe work for energy conservation and frost protection.

Rooflect Attic Space Heat Retention Barrier (20m L x 60cm W)

RooFlect is a laminated insulation cladding made up of three layers, the combination of which contributes to a reduction of your energy costs. The first reflective layer consists of aluminium foil, designed to direct the outside temperature away from your home.

The main body is formed from a bubble wrap arrangement which stores heat energy between 14-20°C that would otherwise be lost through the attic space. This has been proven to increase the overall temperature of the attic. The second reflective layer, is also aluminium foil which reflects heat back into the attic or roof space that would normally be lost from your house.

Strong Reinforced Polypropylene Elevators

LoftLifters are easily fitted, purpose designed, strong reinforced polypropylene elevators which enable the addition of at least 180mm (7") of roof space insulation and the subsequent fitting of a walkable floor. Most houses are constructed so that roof trusses or joists are located about 400mm (16") apart. LoftLifters should be positioned on the trusses at intervals of 600mm (24") so that they can adequately support flooring materials subsequently secured to them. Available in boxes of 12, 48 and 96, these legs when used on rafters at 400mm (16") centres, will permit the laying of 1.2, 4.8 and 9.6 square meters of flooring.

Assembly and use of the Loft Lifter Parts

Easily fitted purpose designed legs which enable the addition of at least 180mm (7") of roof space insulation and the subsequent fitting of a walkable floor. Each box contains 12 legs which when used on rafters at 400mm (16") centres, will permit the laying of at least 1.2² metres of flooring.

ECAT1	5391269755011	Box	120 x 10	47.50

LoftLifters Extenders

The box contains 12 Extension Tubes which will extend the vertical distance of Standard Loft Lifters by 70mm. This will enable the provision of an additional 70mm roof space insulation and the subsequent fitting of a walkable floor. The Barbed Base will push down and over floor joists of between 45mm and 50mm thick.

LFEXT	12 pcs.	5391524313109	Box 28 x 21	7.50

Attic Tent

Insulates the loft access opening into the attic.

This hinged Attic Tent will accommodate conventional attic door ladders of up to 4 sections as illustrated.

The internal dimensions of assembled Attic Tent are 1206mm x 605mm x 250mm

Can be fitted to hinge from the end or side of the loft opening and is deep enough to cover most loft access ladders. Full installation instructions are on the back of the box.

Economiser Draught Insulation Products

Storm Seal Draught Proof - Door and Window Seal, 5M Long

- Sticks firmly and provides prolonged protection for your doors and windows
- Self-adhesive with unique grid adhesive coating
- UV and weather resistant
- For added versatility you can divide the weather strip to make a single seal for narrow edges
- Excellent Flexibility and resilience

Door & Window Seal

- Effectively seals gaps to prevent cold drafts in winter and keep cool air inside during summer
- Flexible and adjustable for use on various door and window sizes
- Made from durable, weather-resistant material for long-lasting performance
- Simple peel-and-stick application with strong adhesive backing
- Reduces energy loss, blocks dust and insects, and dampens noise for a quieter indoor environment

Window Insulation Kit

Kit includes:

- Clear Plastic Film (1.57 x 1.82m)
- Adhesive Tape (12.7mm x 10m)

The Window Insulation Kit is a practical and cost-effective solution for enhancing your home's energy efficiency. Designed to provide extra insulation and prevent heat loss during the colder months, this kit helps maintain a comfortable indoor temperature while reducing heating costs. It's perfect for use in both homes and offices, especially in areas where window draughts are a concern.
